2024 Outlook

Heading into 2023, many were bracing for an almost certain recession. However, despite these concerns, the labor market simply maintained a slow, but steady pace of growth. This resilience has led to a more cautiously optimistic outlook: hope for a possible “soft landing” of reduced inflation without a recession and massive unemployment.

As of the publication of this guide, job growth is consistent, unemployment remains low, labor force participation rates are holding steady (or slightly increasing), and the rate of workers quitting is returning to pre-pandemic levels. We’re still keeping an eye on the possibility of a recession—after all, the full impact of Federal Reserve interest rate changes can take 6 to 12 months to ripple through the economy.

However, one thing remains certain: competition in today’s job market is fierce as ever, so showcasing your value and staying tuned in to market trends is paramount.

Our 2024 Guide for Supply Chain and Logistics Professionals is designed to help you:

- ▶ Gain insights into supply chain and logistics roles, ensuring you’re well-informed and prepared.
- ▶ Boost your confidence in career discussions, knowing the unique value you bring to the negotiating table.
- ▶ Equip you with the knowledge and tools to make informed career decisions and develop strategies for long-term growth.

Trends to Watch

Temporary employment continues to trend down, declining by 242,000 since March 2022. In the past, dips in temp employment have been leading indicators of recessions. That being said, temp employment is still higher than (or on par with) pre-pandemic levels.

In 2023, the Federal Reserve raised interest rates to address inflation. This means that while there could be an initial rise in wages in 2024, the momentum of this wage growth will likely taper off as the year progresses.

The labor force participation rate hasn't fully bounced back to its pre-pandemic levels, possibly because many individuals aged 55 and older chose early retirement during the pandemic. However, it's interesting to note that the participation rates for those aged 25 to 54 have seen a significant uptick.

► Supply Chain & Logistics Careers

As the pandemic caused massive shifts in supply chain and logistics, businesses have made shifts of their own to keep up and evolve. Today's supply chain teams are seeking workers with elevated tech skills to help them prepare for more change and growth. To help you understand the roles in high demand and the expectations for those roles, take a look at the following job descriptions and salary data for key positions in the supply chain and logistics industry.

Procurement Manager

A Procurement Manager sources products and services for a company. They create a buying strategy that takes into account the company budget and necessary supplies and then they find matching vendors. Purchasing Managers are often asked to keep reports on selected vendors and alternatives. The reports show the COO or VP of the supply chain why vendors were selected, the amount of money saved, and resource quantities available. They report to the Chief Operating Officer (COO) or a Vice President of the Supply Chain in many cases, especially if purchasing is crucial to daily operations.

These key employees must manage the transition swiftly and securely while ensuring adherence to pre-set deadlines.

A successful Logistics Manager will complete every transition smoothly with no time delays, lost product, or incidents that prevent the customer from receiving their orders. This role often entails frequent travel to distribution centers, warehouses, and manufacturing plants and generally reports to the CEO of a company or warehouse operation.

Benefits of Working with a Recruiter

As a Supply Chain & Logistics professional with the right mix of skills and experience, you're a hot commodity. The skills gap in the industry is fueling competition among employers, which means greater opportunities for candidates. Generous bonuses and greater professional development opportunities are more commonplace and working with a recruiter is more valuable than ever.

Employers are outsourcing hiring

Reviewing resumes and screening candidates is time-consuming, and the cost of making a bad hire can cost hundreds of thousands of dollars. That's why more employers are trusting third-party recruiters to take care of their hiring. The initial interviewing and screening allow hiring managers to focus on their other priorities. Hiring managers are then exposed to only the most qualified candidates.

This means many of the best positions aren't found on a job board or a company's careers page. These positions are often only revealed when working with a recruiter. Specifically, by working with a recruiter who specializes in the Supply Chain & Logistics industry. Unless you're working with a well-connected recruiter, you might miss out on your dream job.

Recruiters know what employers want

Yes, there are career opportunities made possible by the skills gap, but employers still spend time, attention, and resources to avoid costly hiring mistakes. While presenting yourself as the ideal candidate, you may unknowingly sabotage yourself.

A recruiter can work with you to determine in which areas you excel. Recruiters also know how to clean up any areas that need a little polishing. They can get you feedback from interviews that you may otherwise not be privy to. This way, you'll know what the employer thinks you did well or where you fell short. This insight can be invaluable as it can help you avoid making the same mistakes in the next interview or how to adjust before you accept an offer.

Using a recruiter is a better use of your time

Job searching alone is time-consuming, particularly if you're currently working. On your own, you may be able to apply and talk to three companies a week. Working with a recruiter, you could reach ten times as many employers in the same amount of time. Since that's their full-time job, recruiters work 40+ hours a week to get candidates hired. It will save you time and as a candidate, it costs nothing. That's a pretty good return on investment.

Negotiate a higher salary, as well as better benefits and perks

While we are all for initiatives that reward loyalty, it must be said that switching jobs typically means a big boost in pay. If you've been with your current employer for a while, you've probably been receiving cost of living adjustments and promotions amounting to three to ten percent per year. But when you switch jobs, you could be looking at up to a 15 percent increase or more. If you're not up to date on current salary ranges and bonuses, you could end up leaving money on the table. A recruiter, on the other hand, is keenly aware of the going rate for your skill set and experience and can help negotiate to make sure you're paid what you are worth.

With the demand for talent outpacing supply, especially for experienced Supply Chain & Logistics talent, candidates have a real opportunity to benefit from higher salaries and other perks. Working with an experienced, connected recruiter can help you take advantage of this job market by connecting you to excellent opportunities and competitive pay in far less time than it would take to conduct a job search on your own.
